A NEW EDITION, REVISED AND ENLARGED.

LONDON AND NEW YORK
GEORGE ROUTLEDGE AND SONS, LIMITED

TO
SIR JOHN LUBBOCK, BART., M.P., F.R.S.,
WHO

AS A DISTINGUISHED NATURALIST,

BANKER.

AND

Chairman of the London Chamber of Commerce,

WILL FULLY APPRECIATE ITS UTILITY

AS A BOOK OF REFERENCE,

THIS NEW EDITION IS DEDICATED

BY HIS OBEDIENT SERVANT,

THE AUTHOR.

P R E F A C E.

CHEAP works of ready reference are a necessity of the present day, and this one I have endeavoured to make as complete as possible. My long career as a journalist and author of sixty years' experience has afforded me many facilities for acquiring special knowledge on Commerce and Finance.

Few, perhaps, have contributed so largely to technical literature and popular encyclopædias as I have done, and this, added to an official connection with all the great International Exhibitions which have been held during the last forty years, combined with important official Museum duties, has given me many advantages.

That this work has proved useful is evident from the large sale it has had, and its extensive employment in adding new words to the great Dictionaries of America and Europe.

The vast expansion of Commerce, and the introduction of new products and trades since the work was first published, have, however, rendered additions necessary. Without interfering with the body of the work, I have thought that an Appendix would bring it up to date, by supplementing the few statistics introduced, correcting the fluctuating exchange value of coins in circulation, such as rupees, dollars, taels, etc., and adding new electrical, chemical, cycling, and other trade terms, and products not hitherto described.

As there is really no good Polyglot Dictionary, and a set of the Dictionaries of Continental and other languages is not always at hand for reference, I have thought it desirable to insert the foreign names of many animals and commercial products which are frequently mentioned in prices-current, newspapers, and books of travel.

I can speak practically, from my own experience, of the utility of this work, for I have continually to refer to it for some correct definition of a foreign money, weight, or measure, or the natural history identification of an animal or vegetable product.

One difficulty I have met with is in the modern change of spelling adopted in most of the East Indian names of products, etc., so that it may be found difficult to refer to them readily.

This Dictionary may be considered an "Encyclopædia in brief," and a necessary accessory for the counting-house, or on the library table.

P. L. SIMMONDS.

The Day's Journey of a traveller on foot may be estimated at from 20 to 24 English miles by the road or about 18 geographical miles by the direct distance, if for a very few days, but for many successive days about 17½ miles. In Turkey and Western Persia, though the Tatar couriers ride fast, yet travellers only walk their horses, and their day's journeys may be taken at about 26 to 30 English miles by the road, or as 18 to 23 geographical miles in direct distance. In caravan journeys across the deserts, the day's journey (with camels) is about 16 geographical miles per day, in direct distance for short intervals, but on an extended line, only 15 to 15½; their hourly rate by the road being about 2½ English miles or 2½ geographical miles. With mules the day's journey is 17 or 18 miles. The mean rate of the daily marches of armies is equal to about 14 British or 12 geographical miles by the road; or, if reduced to direct distance, about 10½ geographical miles on a line of 8 or 10 marches; but a single march or even 2 or 3 taken together will be equal to about 11 geographical miles per day.

On the application of this instrument as a link in the line of draught, the oval becomes lengthened in proportion to the degrees of force acting on the loops in opposite directions, and the curved sides approach more nearly towards each other, accordingly. The degree of approximation in the plates, is shown on a scale in divisions corresponding to half and whole hundred-weights, by means of a cross rod secured to one plate acting on a crank attached to the opposite one, thus communicating its effect to the lever index, which, moving over the divisions of the scale, marks the varying degrees of force exerted each moment by the draught to which the instrument is subjected. Messrs. Cottam and Hallen, of London, and Mr. G. Clyburn of Uley, have invented dynamometers, which are improvements on those previously in use, as they also register the space through which the power is exerted.

PENNY, the largest and most ancient

British copper coin, weighing one ounce.

It was at first composed of silver, and

minted with a deep cross, weighing the

20th part of a lb. When broken into two

pats, each was called a haltpenny, and

when into four, each was called a fourth-

thing, or farthing. It was gradually

diminished till the time of Elizabeth,

when its value was reduced to the 62nd

part of an ounce. Pennies are still minted

in silver to a small amount (under 8000 a-

year); but those in ordinary circulation

have been for a long time made of copper.

The pennies coined since 1845 have been

as follows in number:—

1848.....	161,280	1852.....	263,424
1849.....	268,800	1853.....	1,021,440

RUPEE, the principal coin circulating in British India. There were, until lately, two principal kinds current in calculations, the sicea rupee and the Company's rupee; 100 of the former were equal to 116 of the latter. It is ordinarily taken to weigh one tola or 180 grains, the standard being 11-12ths of silver and 1-12th of alloy. The E. I. Company's rupee, which was introduced in 1835 in place of the Sicea, Surat, and other rupees previously current, contains 165.92 grains pure silver, and 15.08 grains alloy; and is worth, reckoning silver at 5s. 2d. per ounce, 1s. 11d. sterling. Its diameter is 1-20th of an inch. It is ordinarily converted into sterling at the rate of 2s. The rupees of the Madras mint, previous to the coinage of 1855, and the different sorts of the Furruckabad rupee, are received and exchanged at par, provided they have not lost by fair wear more than the regulated limit of lightness, ¼ per cent.; if below that limit, they are only taken as bullion. Silver rupees are a modern currency, as there do not exist any in that metal struck anterior to the establishment of the Mahomedan power in India, while a great many in gold have been preserved of far higher antiquity. 3

On account of the silkiness of this cotton, Parkinson calls it Virginian silk. The plant is sometimes called Milk-weed.

SILK-WEIGHT-AND-MEASURE. The size or substance of a silk thread is usually estimated by deniers, an Italian and French weight, the comparative proportion of

which will be understood by the appended remarks. The ounce troy and the ounce "Poids de Marc" of Lyons, by the latter of which silk is tested in France and Italy, are equal in weight, but are differently subdivided. The ounce troy in England is divided into 20 pennyweights $\times 24 = 480$ grains; the ounce of Lyons, "Poids de Marc," into 24 drams $\times 24 = 576$ deniers. The denier is therefore 1-6th less than the English grain, or, as the decimal 0.8333 is to 1.0000,

1 lb. "Poids de Marc" (16 oz. of 576 deniers)	9216 "	7650

The pound troy is to the pound avoirdupois as 14 to 17, nearly. The pound avoirdupois is to the pound "Poids de Marc" as 10 to 11, nearly. The pound "Poids de Marc" is to the pound troy as 4 to 3. The English silk reel is 818 bouts of 44 inches, = 1000 yards. The French, 400 elis, or 475 metres, of 89.371 inches, = 520 yards. The custom of the trade is to reckon 32 deniers to a dram. This has probably been adopted from ease of subdivision, but when carried out creates much error. The standard of silk measure is about 400 yards; that length of a single filament from China cocoons will weigh 2 deniers, and from French or Italian 2½. A 10-denier silk will thus be the combined thread of four or five cocoons.

SILK-WINDER, a silk-thrower; a small reel, or machine for winding off silk.

SILK-WORM, the caterpillar of the silk-moth, the *Bombyx mori*.

SILK-WORM ROT, a disease affecting silk-worms. See MUSCARDINE.

SILL, CILL, the lower beam of a window or door frame.

SILLABUB, a mixture of new milk, wine, sugar, and spices.

SILO, a pit, or subterraneous store for keeping grain.

SILT, the accumulated alluvium washed down by rivers, and forming deposits.

SILVER, one of the precious metals. The British silver coinage consists of crowns, half-crowns, florins (first coined in 1849), shillings, sixpences, fourpences, threepences, twopences, and pence. From a pound of standard silver, are coined either 13 1-5th crowns, 26 2-5ths half-crowns, 66 shillings, or 132 sixpences. Silver is not a

legal tender in Great Britain and her colonies, for more than 40s. at any one time. The relation of gold to silver, in the legal coinage of the United States, is as 1 to 15.988; in Great Britain, as 1 to 14.288; and in France, as 1 to 15.499. Thus it will be seen, that one ounce of pure gold will, in the United States, be equal to that produced from the coinage of 15.988 ounces of pure silver; in Great Britain it will be equal to that derived from only 14.288 ounces of silver; and in France to 15.499 ounces. Silver is the legal tender in France, and most largely circulated in China and the East. In March, 1853, an act came into operation in the United States, for reducing the quantity of silver in the silver coins, retaining the same denomination, on the principle followed in issuing the silver coins of England. Prior to that period, the coined silver always disappeared from circulation, but not since. The mint value of silver, is 5s. 6d. the ounce. The price of silver bars, standard, was in London, 55½d., in January, 1850; reached 62½d. in January, 1856, and stands at 62d. in January, 1858. The silver coined at the British Mint since 1840, has been as follows:—

1840	£216,414	1849	£219,592
1841	96,175	1850	129,006
1842	192,852	1851	87,863
1843	239,580	1852	189,597
1844	610,622	1853	701,545
1845	647,658	1854	140,480
1846	559,548	1855	195,511
1847	125,730	1856	462,528
1848	35,442	1857-60	1,684,593

These figures show that our silver coinage is not regulated by the demand necessary to satisfy the hands of the public, but by some other undefined system. It is generally understood that the Bank of England has no control whatever over this coinage. In the last 20 years the British silver coinage has been under £4 millions (and of this £677,550 was worn silver, re-coined since 1847), certainly an insufficient amount to supply the loss by wear and tear, export, melting, and the growing demands of commerce for small change. Silver coined since 1849:—

	Weight, oz.	Number of Pieces.
1849	128,880	1,281,370
1850	434,880	2,054,773
1851	409,440	3,232,973
1852	319,520	3,292,568
1853	680,442	3,247,030
1854	2,551,072	12,078,946
1855	510,838	4,528,120
1856	710,979	4,379,200
1857	1,681,920	9,279,798
1857-60	6,132,180	29,313,732

The value of the imports of silver coin and bullion into the United Kingdom, in the five years ending with 1855, was as follows:—

1851	5,000,000	1854	5,500,000
1852	6,000,000	1855	6,000,000
1853	7,500,000		
Total	£30,000,000		

- The silver bullion received at the Bank of England, in the three years ending with 1855, averaged nearly 20,000,000 ounces per annum; but it was all sent out again, and did not go into circulation as coin in England.

SLAG, a molten vitreous product of metals or minerals, after fusion in blast-furnaces; the scoria left after smelting metal, which is now applied to various useful purposes.

The slag of iron-works is usually called cinder. Silica, alumina, chloride of calcium, and alum are obtained from slag, and it is cast into table-tops, and architectural ornaments, which take a beautiful polish. It may also be used for roofing, like rough glass, and in thin slabs like Dutch tiles, instead of plaster. It was formerly only used for road-making, or for rough walls.

SLAKED-LINE, line reduced to a powder.

SLAM, a name given to the refuse from alum works.

SLAT, SLOAT, a piece of wood used as a stretcher, as the bar of a chair, the sloats of a cart.

SLATE, argillaceous schist or mountain-rock, of which there are many varieties. The property of splitting readily into plates, and the moderate degree of hardness, render some of its varieties useful for many purposes, as for roofing and writing slates, pencils, whet-stones, &c. Its smooth and perfect surface adapts it for ornamental and useful purposes, as chimney-pieces, table-tops, monuments, cisterns, tablets, bathing-tubs, and the beds of billiard-tables. Small slates for schools, and tradesmen's use, &c. are largely used; and many thousands are made and sold annually in different countries. See SLATES.

SLATE-AXE, a mattock for shaping slates for roofing, and making holes in them to fasten them to the roof.

SLATE BILLIARD-TABLE, a billiard-table with a slate-bed.

SLATE-BOOK, two or more slabs of framed slate bound together for writing on.

SLATE-FRAME, the narrow wood border for a writing-slate or slate-book.

SLATE-MERCHANT, an importer or wholesale dealer in slates.

SLATE-PENCIL, a thin, narrow slip of soft slate, for writing on a slab. About 500 tons of these are made annually.

SLATE-QUARRY, a place in which slate is obtained. There are important slate quarries in the North of England and North Wales, in France, Belgium, and the Rhine districts, &c. In North Wales twenty quarries are now worked, and the production of slates in the kingdom is about 360,000 tons.

SLATER, a workman skilled in shaping and working slates, and in roofing buildings with slate or slate laying.

SLATES, small shaped plates or large slabs of slate, chiefly used for roofing. For commercial purposes slates are classed into the following principal varieties:—Doubles, measuring 13 inches by 7, and smaller, 11 by 7; ladies, 16 by 10, 16 by 8, 14 by 8, or 12 by 8; countesses, 20 by 10; viscountesses, 18 by 10; marchionesses, 22 by 12; duchesses, 24 by 12; princesses, 24 inches long, various breadths. A thousand slates number 1200, and 60 slates are also allowed over for breakage. There are also rags and queens, measuring 36 by 24; imperials and patent slates 30 by 24; Westmorelands, and some other kinds.

- SLATE-SLAB**, a sheet or plate of slate. Those of first quality are sawn all round, and split as near the thickness required as possible. Sorted slabs are of promiscuous lengths and breadths. Some slabs are sawn to order. Ended slabs are those sawn at the ends only. Second-quality slabs are unplanned.
- SLATE-WORKS**, a yard, &c. where slate is sawn or shaped.

- SLIM**, to shuffle over work.
- SLING**, a coin current in Siam, worth about 2s. 2d.; a leather loop or cord for throwing stones; a brace or support of any kind. *
- SLINGS**, ropes or iron-bands for securing a yard to the mast; tackle with hooks passed round a cask or package, to hoist or lower it.
- SLINK-LAMB**, one that has been dropped or born prematurely. The soft skin of such is used for glove-linings and military purposes.
- SLINKS**, the skins of prematurely born lambs, calves, &c.
- SLIP**, a narrow dock or place for hauling up a ship, or building a ship on; a leash for holding a dog; a woman's muslin or satin under-skirt or petticoat; a printer's galley-proof of a column of type; a quantity of yarn; the rubbings of grindstones. *
- SLIPCOAT**, new-made cheese; a small and very rich variety of Yorkshire cheese, not unlike butter but white.
- SLIP-KNOT**, a cord with a noose; a knot easily untied.
- SLIPPER**, an easy shoe of different materials; a skid for a wheel.
- SLIPPER MANUFACTURER**, a maker of carpet-shoes, or light thin in-door leather shoes.
- SLIT-DEAL**, an inch and a quarter plank cut into two boards.
- SLITTING MILL**, a thin sheet-iron disk used for slicing by the lapidary; a mill for making nail-roads.
- SLIVER**, a piece torn or split off; a long continuous lap or twist of wool or cotton; in wool, formed by a machine attached to the carding-engine, and used for making the warp of cloth.
- SLOE**, the fruit of the *Prunus spinosa*; the juice of the fruit is used in France as an astringent substitute for catechu.
- SLOKAN**, **SLOKE**, names for the edible seaweed, *Porphyra laciniata*, also called laver; the green sloke is *Ulva latissima*.
- SLOOP**, a cutter; a one-masted fore-and-aft-rigged vessel, having its main-sail attached to a gaff and lower boom.
- SLOOP OF WAR**, a naval vessel of any rig, mounting from 18 to 32 guns.
- SLOP-BASIN**, a crockery-ware basin forming part of a tea-service, for emptying the dregs from tea-cups into.
- SLOPE**, an inclination or gradient.
- SLOP-PAIL**, a metal bucket for chamber use.
- SLOPS**, ready-made clothing; a seaman's name for all kinds of clothing, or fabrics suited for clothing, and bedding, supplied from the ship's stores.
- SLOR**, a bolt or bar. *
- SLOTE**, a trap-door in the stage of a theatre.
- SLOT-HOUND**, a blood-hound.
- SLOTING AND KEY-GROOVING MACHINE**, a machine for cutting the key-grooves and bosses of wheels.
- SLUB**, **SLUBBING**, a preparatory thread or roll of wool, drawn out and slightly twisted in the first spinning frame, used for the weft in cloth-making.
- SLUBBING-BILLY**, the first spinning frame or machine for preparing wool in threads, from short lengths of scribbled wool called cardings.
- SLUBBING-MACHINE**, a machine for drawing the slivers or laps of cotton, and twisting and winding them on bobbins.
- SLUGS**, small leaden bullets; half-roasted ore; heating-irons for hatters and tailors; naked molluscs, species of *Limax* which are still, in some countries, a popular remedy in consumptive complaints. See **TREPANG**.
- SLICES**, the tide or flood-gates by which water is admitted to locks, docks, &c.
- SLUSH**, soft mud; a name on ship-board for the grease of pork and beef skinned from the ship's coppers, usually, like the refuse fat in kitchens, the perquisite of the cook.

SLUSH-TUB, a vessel for holding grease.

SMACK, a small sloop; a cutter or fishing-boat.

SMALL-COAL, **SMALLS**. See **BREEZE**, **BURGEER**, and **SLACK**.*

- STANDARD**, an upright of iron, for fencing; a flag; a test or rule of measure; a solid measure by which hewn timber is estimated, varying in different timber countries. The St. Petersburg standard hundred of deals, and deal ends, contains 120 pieces, 12 feet long, 1½ inch thick, and 11 inches broad, = 165 cubic feet. The Swedish standard hundred contains 121 pieces, 14 feet long, 3 inches thick, and 9 inches broad. The Norwegian standard hundred contains 120 pieces 12 feet long, 3 inches thick, and 9 inches broad. The standard hundred by which battens are commonly sold, contains 120 pieces, 12 feet long, 2½ inches thick, and 7 inches broad. Dantzic and Memel deck deals are sold by a standard of 40 feet long, 3 inches thick, and 12 inches wide. The standard of red deals would weigh about 2½ tons, and that of white wood 2½ tons. The term *standard* is used to designate the purity and weight of coins, that is, the fineness of the metal of which they are made, and the quantity of it contained in them. A pound troy, or 12 oz. of the metal of which English silver coins are made, contains 11 oz. 2 dwts. pure silver, and 18 dwts. alloy. This pound is coined into 66 shillings, so that each shilling contains 80.727 grains fine silver, and 87.27 grains standard silver; and the *money pound*, consisting of 20 shillings, contains 1614.545 grains pure silver, and 1745.454 grains standard silver. The fineness of gold is estimated by carats, gold of the highest degree of fineness, or pure, being said to be 24 carats fine, 22 being the purity of our present gold coins. The sovereign, or 20 shilling piece, contains 113.001 grains fine gold, and 123.274 grains standard gold. The pound troy of standard gold, is coined into 46 sovereigns, and 88-120ths of a sovereign, or into £46: 14: 6d. The mint, or standard price of gold, therefore, is said to be £46: 14: 6d, per pound troy, or £3: 17: 10½d. an ounce. The alloy in coins is reckoned of no value; it is allowed in order to save the trouble and expense that would be incurred, in refining the metals to their highest degree of purity; and because, when its quantity is small, it renders the coins harder, and less liable to be worn or rubbed. Were the quantity of alloy considerable, it would lessen the splendour and ductility of the metals, and would add too much to the bulk of the coins.—*J. Cullloch's Principles of Commerce*.—There are several standards for gold now used, as 22, 18, 15, 12, and 9 carats.
- STANDARD-BEARER**, an officer who carries a banner or colours in a procession.
- STANDARD-MARK**, a legal assay mark for gold of 22 carats fine, and for silver of 11 oz. 2 dwts. Articles of all standards, capable of bearing a stamp, are marked also with the initials of the maker's name, the arms or mark of the Assay Office, and a letter for the date of the year. Different kinds of letters are used by the Goldsmiths' Company; the one now employed is the old black letter. The alphabet was begun in 1856, C being the letter for the present year, 1858. It runs on to 20 letters, J being omitted; a fresh alphabet is then again commenced. The standard mark for England is a lion passant; for Edinburgh, a thistle; for Glasgow, a lion rampant; for Ireland, a harp crowned. Gold of 18 carats fine, a crown and the figures 18. Silver of the new standard, which is 11 oz. 10 dwts. fine, bears the figure of Britannia. See **HALL-MARK**.
- STANDING**, a stall placed in a market, or on the foot pavement in a street; a workman's loom in a lower flat or story.

- TONNAGE**, the internal measurement of a ship, representing the number of tons of cargo she will carry. Tonnage is estimated sometimes by bulk, but more generally by weight; a ton by bulk being equal to 40 cubic feet; and a ton by weight equalling 20 cwt. There are certain formulæ employed by ship-builders, whereby the tonnage is calculated, from the length, breadth, and depth of the vessel; but these formulæ seldom give the real tonnage, or the true amount of cargo which the vessel will carry; because two vessels exactly equal in length, breadth, and depth, measured as those dimensions usually are, may have very different internal capacity, owing to different curvatures of the hull. A ship will sometimes carry more than her registered tonnage indicates, sometimes less; and therefore the word "tonnage" is to be regarded only as a rough approximation to the burden which the vessel will carry.
- TONNELIER**, a French cooper; a seaman who fills a water cask.
- TON OF WATER.** Taking water to weigh 10 lbs. per gallon, there ought to be 224 gallons in the ton. The French cubic mètre or ton is equal to 220 English imperial gallons. The London Water Companies use in their computations a ton of 216 gallons, namely, 6 barrels of 36 gallons each.

WINE MEASURE. In this the imperial gallon is the legal standard, and is used for every liquid; but the larger measures are used very often only for a particular kind, as wine, beer, oil, &c.

IMPERIAL MEASURE.

4 gills or quarters...	1 pint
2 pints	1 quart
4 quarts	1 gallon
5 gallons	1 pin or keg (brandy)
9 gallons	1 firkin (beer)
10 galls. (8½) old meas.	1 anker (brandy)
18 gallons (14½) ditto...	1 kilderkin
31½ gallons	1 half hogshead
36 gallons	1 barrel (beer)
42 gallons (34)...	o. m. 1 tierce
63 gallons (52½)...	ditto 1 hogshead
84 gallons (69½) ditto	1 puncheon
126 gallons (104½) ditto	1 pipe or butt
252 gallons (209½) ditto	1 tun (oil)

Thus the old wine measure will be found to be considerably enlarged,—14 96000 imperial gallons being equivalent to 18 gallons

of the old. In regard to all vessels of larger capacity, such as hogsheds, puncheons, &c.—they are gauged and charged according to the exact quantity contained therein. Many of the above measures are, however, entirely nominal. Wine is imported into this country in butts or pipes, and hogsheds, the standards of which are usually as follows:—

Pipe of Cider.....	100 to 118 gallons
„ Port.....	115 „
„ Sherry.....	108 „
„ Lisbon.....	117 „
„ Cape or Madeira ..	92 „
„ Teneriffe	100 „
„ Malaga	105 „
Butt of Sherry	108 „
Hogshed of Claret	46 „
„ Cape.....	92 „
„ Marsala.....	93 „
„ Brandy... 45 to	50 „
„ Rum..... 45 to	50 „
„ Tent.....	52 „
Autn of Hock	30 „

	Tons.	Value.
Cotton	81,273.	£8,065,671
Linen	11,140.	1,365,656
Woolen and worsted	11,922.	2,745,658
Do. mixed	287.	142,764
Silk	268.	294,172
	104,890	12,613,921

YARN-MEASURE. The various manufacturers have different measures. The quality of yarn is expressed in England by counts or numbers, denoting the number of hanks in a pound, signifying coarseness or fineness; reckoning the length of the hank of cotton yarn at 840 yards, or 7 leas or lays, of 120 yards each. These "counts" range technically, from 2 to 490 hanks in a lb. The hank of worsted yarn is sometimes counted in the same way, but more generally at 560 yards, or 7 leas of 80 yards each. Linen yarn is estimated in England by the number of leas or cuts, each of 3 yards, contained in a pound weight; but in Scotland, by the number of pounds in a spindle, or 43 leas; thus, No. 48 in England, is called 1 lb. yarn in Scotland. The following are the principal subdivisions of each manufacture:—

COTTON-YARN MEASURE.

Inches,	
54 =	1 thread.
432 =	80 " = 1 lea, or rap.
3024 =	560 " = 7 " = 1 hank, or 840 yds.
	A spindle of 18 hanks is 15,120 yards.

ELECTRICAL TERMS. These have come into use since this Dictionary was first published, and are somewhat variable as employed by different electric-

cians. The unit of capacity is one farad; of resistance one ohm; of work one joule; of activity one watt; of quantity one coulomb; of current one ampere; of magnetic field one gauss; of pressure one volt; of force one dyne. These are derived from the names of the eminent electricians, etc. Thus, Michael Faraday, George S. Ohm and James P. Joule, famous English and German discoverers; James Watt and Andre M. Ampere, English and French inventors; Chas. A. Coulomb and Carl F. Gauss, Volt is named from the Italian discoverer Volta; the dyne from the root word dynamo, itself meaning force.

ELECTRICITY. For producing light, the electricity is usually generated by the rapid revolution of a closed conductor in a magnetic field; that is, by coils of insulated wire moving near the poles of a magnet, the motive power being a steam or gas engine. Electricity can be measured in three ways: 1. chemically, by the decomposition of water; 2. by the heat produced; 3. by the deflection of a magnetic needle. Electricity can be produced by steam at 3d. per kilowatt per hour.
